Subject: Round 2 Metals - Tox Data Summary Reports

Hi Dawn -

As discussed, I am forwarding PDFs of the Tox Reports for the 4 locations that were re-sampled in May (5/23 -5/24/12). As you know, the samples were analyzed for metals only. I will also be forwarding the results to HQs, ATSDR and WDP. As discussed, there are trigger level exceedances for each of the four homes.

As discussed, we will be re-sampling HW-8a which had elevated concentrations of manganese (942 ug/L at wellhead and 915 ug/L in the filtered wellhead sample). This well serves two homes - each home has a separate treatment system. We will be sampling the wellhead and each tap (post treatment). Previously only the wellhead was sampled since the homes were being provided bulk water.

I understand that management is hoping to release the results mid-July along with any other outstanding data. As such, we would appreciate if you would complete your review and provide your findings (memos) ASAP. Please don't hesitate to contact me with any questions.

Thanks again for your help - Kelley
